CSE 264 – Web System Programming – Spring 2015

Final Project

1. Your final project is to implement a game or puzzle as a web app that compiles to a native app that runs on a smart phone (Android). Here's a chance to use some creativity.

2. The complexity should be somewhere between Tic Tac Toe and Sudoku.

3. You should use html, css, javascript, jquery and jquery mobile to implement the app and Cordova to compile it to an Android app. All other technologies are optional.

4. The app may be totally stand alone or may have a server side component.

5. All final projects must be completed by the final exam.
