CSE 264 – Web Systems Programming, Spring 2015
Homework Assignment 3
Restyling of the Lehigh Home Page
Due Wednesday, 2/11/15, 11:00 PM

- **Objective**
  To get some more experience using CSS.

- **Description**
  Save the Lehigh home page and change it's styling using CSS.

- **Instructions**
  1. Fire up your browser and navigate to www.lehigh.edu. Do a Save As on the main page. This should create an .html file with the html for the page and a folder with all the other files needed by the page.

  2. Look over the .html file and get a feel for it's structure. Look over the contents of the folder and see what other files are being used.

  3. Replace the Lehigh logo with another logo of your choosing.

  4. Pick an analogous color scheme different from the one currently in use on the Lehigh home page and implement it on the page.

  5. Change all the sans serif fonts on the page to some type of serif font – you choose. Make sure that the size of the fonts is similar to the ones currently in use.

  6. Change all the links on the page:

     a) Get rid of any underlines that appear when hovering; instead make the link go bold when hovering.

     b) Change the colors of the links in each of their states to something distinctly different.

  7. To submit your assignment, ZIP up all the files and upload the zipped file to Coursesite.
